

SUSTAINABILITY POLICY

Pangeotek recognises that our operations have an effect on the local, regional and global environment. We are aware of the importance of assessing our impact on the environment and as a consequence we are committed to continually improving our environmental performance and preventing pollution.

Sustainability is at the forefront of everything we do. We understand the impact that our operations can have on the environment and are committed to minimising our carbon footprint.

Environmental Regulations

Pangeotek endeavours to meet or exceed all applicable environmental regulations and all other domestic legislation concerned with the protection of natural resources.

Furthermore, we make it a priority to stay informed and up-to-date on the latest environmental regulations and strive to comply with them in all aspects of our operations.

Environmental Performance

As a company we are committed to continual improvement in our environmental performance and ongoing prevention of pollution. It is our policy to improve noise emissions, air pollution and the safe disposal of waste products.

We encourage our employees to use public transport, walk to work or work from home to reduce carbon emissions from daily commutes. Additionally, we facilitate virtual meetings and use video conferencing to reduce the need for unnecessary travel.

Environmental Impact

We strive to work with suppliers and partners who share our values and prioritise sustainability in their operations. This includes sourcing products and services from environmentally responsible companies and utilising eco-friendly materials whenever possible.

In addition, we carefully consider our transportation methods and encourage the use of public transportation when traveling to client sites or meetings.

We prioritise energy efficiency in our office. This includes using energy-saving lightbulbs, setting computers and other equipment to energy-saving modes, and turning off lights and electronics when not in use.

We also make a conscious effort to reduce paper usage by utilising digital platforms for communication and document sharing.

Product Development

As a service provider and a product developer, the company assesses the environmental impact of any new development at every stage throughout the design and fabrication process.

This document is uncontrolled when not viewed on the company's Activ system

Pangeotek are currently developing specialist geotechnical drilling software that will reduce the overall drill time on location. This will ultimately produce huge savings in the amount of fossil fuels burnt during a contract as well as reducing the carbon footprint and pollution caused by site investigation projects.

Waste Management

All waste products generated by Pangeotek are disposed of through safe and responsible methods. We recognise that a crucial part of our environmental strategy is sustainable waste management and as such endeavour to reuse and recycle materials wherever possible.

Employees

We ensure all employees and sub-contractors have suitable and sufficient information, instruction, training and supervision in order to act with due consideration for the environment. Additionally, all sub-contractors working on our behalf are required to meet with an equal standard of care for the environment.

In conclusion, Pangeotek recognise the importance of sustainability in all aspects of our operations. Though our impact may be minimal, we understand that every effort counts towards creating a more sustainable future. We are committed to minimising our environmental footprint and promoting sustainable practices in our office, while also incorporating sustainable principles in the advice we provide to our clients.

We will continually review and improve our sustainability policies and practices to ensure that we are making a positive impact in our industry. By working together to prioritise sustainability, we can contribute to a healthier planet for generations to come.
